CSES 1069 | Introductory Problems | https://cses.fi/problemset/task/1069

You are given a DNA sequence: a string consisting of characters A, C, G, and T. Your task is to find the longest repetition in the sequence. This is a maximum-length substring containing only one type of character.

Input

The only input line contains a string of n characters.

Output

Print one integer: the length of the longest repetition.

Constraints

- $1 \le n \le 10^6$

Example

Input
ATTCGGGA

Output
3
