A. Game with Integers

time limit per test 1 second
memory limit per test 256 megabytes
input standard input
output standard output

Rating: 800 | Tags: games, math, number theory | https://codeforces.com/problemset/problem/1899/A

Vanya and Vova are playing a game. Players are given an integer n. On their turn, the player can add 1 to the current integer or subtract 1. The players take turns; Vanya starts. If **after** Vanya's move the integer is divisible by 3, then he wins. If 10 moves have passed and Vanya has not won, then Vova wins.

Write a program that, based on the integer n, determines who will win if both players play optimally.

Input

The first line contains the integer t ($1 \le t \le 100$) — the number of test cases.

The single line of each test case contains the integer n ($1 \le n \le 1000$).

Output

For each test case, print "`First`" without quotes if Vanya wins, and "`Second`" without quotes if Vova wins.

Example

Input
6 1 3 5 100 999 1000

Output
First Second First First Second First
