Crystal ball sequence on hexagonal lattice is defined as follows: *n*-th element is the number of lattice points inside a hexagon with (*n* + 1) points on each side. The formula is $H_n = 3 \cdot n \cdot (n + 1) + 1$. You are given *n*; calculate *n*-th element of the sequence.

Input

The only line of input contains an integer *n* ($0 \le n \le 9$).

Output

Output the *n*-th element of crystal ball sequence.
